Rule #1

#1 NEW YORK TIMES BESTSELLER • “The clearest and best book out there to get you on the path to riches. This one’s special!”—Jim Cramer, host of CNBC’s Mad Money “Great tools for anyone wanting to dabble in the stock market.”—USA Today Phil Town is a very wealthy man, but he wasn’t always. In fact, he was living on a salary of \$4,000 a year when some well-timed advice launched him down a highway of investing self-education that revealed what the true “rules” are and how to make them work in one’s favor. Chief among them, of course, is Rule #1: “Don’t lose money.” In this updated edition to the #1 national bestseller, you’ll learn more of Phil’s fresh, think-outside-the-box rules, including: • Don’t diversify • Only buy a stock when it’s on sale • Think long term—but act short term to maximize your return • And most of all, beat the big investors at their own game by using the tools designed for them! As Phil demonstrates in these pages, giant mutual funds can’t help but regress to the mean—and as we’ve all learned in recent years, that mean could be very disappointing indeed. Fortunately, Rule #1 takes readers step-by-step through a do-it-yourself process, equipping even the biggest investing-phobes with the tools they need to make quantum leaps toward financial security—regardless of where the market is headed.

The Book of Ezekiel, Chapters 1–24

To most modern readers the book of Ezekiel is a mystery. Few can handle Ezekiel's relentless denunciations, his unconventional antics, his repetitive style, and his bewildering array of topics. This excellent commentary by Daniel I. Block makes sense of this obscure and often misunderstood prophet and demonstrates the relevance of Ezekiel's message for the church today.

Surveys on Surgery Theory, Volume 1

Surgery theory, the basis for the classification theory of manifolds, is now about forty years old. There have been some extraordinary accomplishments in that time, which have led to enormously varied interactions with algebra, analysis, and geometry. Workers in many of these areas have often lamented the lack of a single source that surveys surgery theory and its applications. Indeed, no one person could write such a survey. The sixtieth birthday of C. T. C. Wall, one of the leaders of the founding generation of surgery theory, provided an opportunity to rectify the situation and produce a comprehensive book on the subject. Experts have written state-of-the-art reports that will be of broad interest to all those interested in topology, not only graduate students and mathematicians, but mathematical physicists as well. Contributors include J. Milnor, S. Novikov, W. Browder, T. Lance, E. Brown, M. Kreck, J. Klein, M. Davis, J. Davis, I. Hambleton, L. Taylor, C. Stark, E. Pedersen, W. Mio, J. Levine, K. Orr, J. Roe, J. Milgram, and C. Thomas.

Isaiah 1-33, Volume 24

The Word Biblical Commentary delivers the best in biblical scholarship, from the leading scholars of our day who share a commitment to Scripture as divine revelation. This series emphasizes a thorough analysis of textual, linguistic, structural, and theological evidence. The result is judicious and balanced insight into the meanings of the text in the framework of biblical theology. These widely acclaimed commentaries serve as

exceptional resources for the professional theologian and instructor, the seminary or university student, the working minister, and everyone concerned with building theological understanding from a solid base of biblical scholarship. Overview of Commentary Organization Introduction—covers issues pertaining to the whole book, including context, date, authorship, composition, interpretive issues, purpose, and theology. Each section of the commentary includes: Pericope Bibliography—a helpful resource containing the most important works that pertain to each particular pericope. Translation—the author’s own translation of the biblical text, reflecting the end result of exegesis and attending to Hebrew and Greek idiomatic usage of words, phrases, and tenses, yet in reasonably good English. Notes—the author’s notes to the translation that address any textual variants, grammatical forms, syntactical constructions, basic meanings of words, and problems of translation. Form/Structure/Setting—a discussion of redaction, genre, sources, and tradition as they concern the origin of the pericope, its canonical form, and its relation to the biblical and extra-biblical contexts in order to illuminate the structure and character of the pericope. Rhetorical or compositional features important to understanding the passage are also introduced here. Comment—verse-by-verse interpretation of the text and dialogue with other interpreters, engaging with current opinion and scholarly research. Explanation—brings together all the results of the discussion in previous sections to expose the meaning and intention of the text at several levels: (1) within the context of the book itself; (2) its meaning in the OT or NT; (3) its place in the entire canon; (4) theological relevance to broader OT or NT issues. General Bibliography—occurring at the end of each volume, this extensive bibliography contains all sources used anywhere in the commentary.

Active Particles, Volume 1

This volume collects ten surveys on the modeling, simulation, and applications of active particles using methods ranging from mathematical kinetic theory to nonequilibrium statistical mechanics. The contributing authors are leading experts working in this challenging field, and each of their chapters provides a review of the most recent results in their areas and looks ahead to future research directions. The approaches to studying active matter are presented here from many different perspectives, such as individual-based models, evolutionary games, Brownian motion, and continuum theories, as well as various combinations of these. Applications covered include biological network formation and network theory; opinion formation and social systems; control theory of sparse systems; theory and applications of mean field games; population learning; dynamics of flocking systems; vehicular traffic flow; and stochastic particles and mean field approximation. Mathematicians and other members of the scientific community interested in active matter and its many applications will find this volume to be a timely, authoritative, and valuable resource.

The West Yorkshire Regiment in the War 1914-1918 Vol 1

Another weighty regimental history, two volumes, 820 pages in all covering the record of twenty-two battalions in France, Flanders, Italy and Gallipoli (all of them served on the Western Front). When war broke out the regiment consisted of two Regular battalions (1st and 2nd), two Special Reserve (3rd and 4th) and four Territorial battalions (5th to 8th); the 1st Battalion went to France with 6th Division in September 1914, the 2nd Battalion came home from Malta to join the newly formed 8th Division (Regular) and went to France in November 1914. Both battalions remained in the same brigades (18th and 23rd) and divisions throughout the war. The four Territorial battalions each formed a 2nd and a 3rd line battalion; the four original battalions made up the 146th Brigade, 49th (West Riding) Division, arriving in France in April 1915, the second line battalions combined to make the 185th Brigade, 62nd (2nd West Riding) Division which arrived in France in January 1917. Kitchener's call to arms resulted in eleven Service battalions being raised, 9th to 18th (the 17th was formed as a Bantam battalion) and 21st; of these only 13th and 14th did not go on active service. The 21st Battalion became a Pioneer battalion in 4th Division and the 22nd was a Labour battalion which also went to France. This history records events in chronological order, the dates of the operations being described are shown in the margin as are the identities of the battalions involved. Volume 1 (x + 355pp with 18 maps and 15 b/w photos) covers the period from the outbreak of war to the end of 1916, the close of the Somme offensive and includes the Dardanelles campaign where the 9th Battalion was in action with the 11th (Northern) Division. On 1st July 1916, the first day of the Somme, the 10th Battalion attacked at Fricourt and incurred the heaviest casualties of any battalion - 710, of whom 307 were killed including the CO, 2IC, adjutant and two company commanders. More than half of them are in Fricourt New Military Cemetery which is in the No Man's Land across which they attacked and where they died. The CO (Lt Col Dickson) and his adjutant (Capt Shann) lie side by side. There is a Roll of Honour for the period covered in which the other ranks are listed alphabetically by battalions as are the Territorial battalion officers; the other officers are shown in one group in alphabetical order with the battalion number in front of the name. Although the note at the head of the officer casualty list states that the theatre in which death occurred is France and Flanders unless otherwise indicated, nonetheless 'Gallipoli' is not shown against the names of the officers of the 9th Battalion who died there, and so one is left with the wrong impression they died on the Western front.

Dynamics of Vehicles on Roads and Tracks Vol 1

The International Symposium on Dynamics of Vehicles on Roads and Tracks is the leading international gathering of scientists and engineers from academia and industry in the field of ground vehicle dynamics to present and exchange their latest innovations and breakthroughs. Established in Vienna in 1977, the International Association of Vehicle System Dynamics (IAVSD) has since held its biennial symposia throughout Europe and in the USA, Canada, Japan, South Africa and China. The main objectives of IAVSD are to promote the development of the science of vehicle dynamics and to encourage engineering applications of this field of science, to inform scientists and engineers on the current state-of-the-art in the field of vehicle dynamics and to broaden contacts among persons and organisations of the various countries engaged in scientific research and development in the field of vehicle dynamics and related areas. IAVSD 2017, the 25th Symposium of the International Association of Vehicle System Dynamics was hosted by the Centre for Railway Engineering at Central Queensland University, Rockhampton, Australia in August 2017. The symposium focused on the following topics related to road and rail vehicles and trains: dynamics and stability; vibration and comfort; suspension; steering; traction and braking; active safety systems; advanced driver assistance systems; autonomous road and rail vehicles; adhesion and friction; wheel-rail contact; tyre-road interaction; aerodynamics and crosswind; pantograph-catenary dynamics; modelling and simulation; driver-vehicle interaction; field and laboratory testing; vehicle control and mechatronics; performance and optimization; instrumentation and condition monitoring; and environmental considerations. Providing a

comprehensive review of the latest innovative developments and practical applications in road and rail vehicle dynamics, the 213 papers now published in these proceedings will contribute greatly to a better understanding of related problems and will serve as a reference for researchers and engineers active in this specialised field. Volume 1 contains 78 papers under the subject heading Road.
